Vineet Agarwal, Managing Director of Transport Corporation of India, noted the importance of modernisation in the Indian aviation sector. "Budgetary allocations for enhancing intermodal connectivity for airports, sea-plane ports, and special helipads will help improve passenger transit," he said.

Additionally, integrating advanced technologies like automated air traffic management systems and expanding Digi-Yatra to more airports will improve operational efficiency and enhance passenger convenience.

## ET TRAVEL

The screenshot shows a Zee News article with a timestamp of 12:05 IST. The headline is 'Budget 2025 Expectations Live Updates: Indian Railways: Catalyst For Jobs, Logistics, And Economic Progress'. The article text states that railways are a crucial component for multimodal logistics in India, offering a cost-effective and climate-friendly medium of transportation. It highlights the growth in Dedicated Freight Corridors (DFCs) and multimodal cargo parks, which are expected to improve India's Logistics Performance Index. The article also mentions the government's goal to increase capital expenditure by 12-15% in the upcoming Union Budget for FY'26, which will further enhance the efficiency of rail operations. The article concludes by stating that this will enable the logistics sector to harness the full potential of the Indian railways and bring more revenues to the sector, making it a key driver for overall economic growth.

## Hopeful govt will increase capital expenditure by 12-15% in Budget 2025, says Transport Corporation of India

Pre-budget expectations quote from Transport Corporation of India (TCI Ltd.)

"India's logistics sector is at a fulcrum, where the government's sustained emphasis on multimodal connectivity, infrastructure and skill development has proven to be transformative. These initiatives are driving down logistics costs as a percentage of GDP while making the sector less carbon-intensive. Building on the momentum of past trends, we are hopeful that the government will increase capital expenditure by 12-15% in the Union Budget for FY'26. This increase will catalyse the economic growth for realizing India's vision of becoming a \$30 trillion economy by 2047.

Additionally, we look forward to incentives for increasing adoption of clean fuels and large commercial EVs through the development of charging infrastructure along major routes, to align with the nation's climate goals. Continued focus on digitization, simplification of documentation and streamlining policies to ensure seamless goods movement across states will further strengthen supply chains, enhancing India's global trade competitiveness. Incentives for high value manufacturing, inflation control by focusing on the 360-degree ecosystem for reducing post-harvest losses through cold storage and digitization will further boost the rural economy, leading to bottom-up growth spurt. These steps will position logistics as a key driver of sustainable economic growth." - Vineet Agarwal, Managing Director, Transport Corporation of India Ltd. (TCI)
