Job Title: Website Maintenance Developer

Job Summary

We are looking for a Website Maintenance Developer with hands-on experience in React, Next.js, API integration, and technical SEO. You will maintain and improve our website, resolve issues, and ensure it remains fast, responsive, secure, and easy to use.

Key Responsibilities

- Maintain and update websites built with React and Next.js.
- Troubleshoot bugs, broken links, layout issues, and compatibility problems.
- Integrate and maintain APIs for website features and third-party services.
- Improve website speed, performance, and Core Web Vitals.
- Implement technical SEO improvements, including metadata, structured data, sitemaps, redirects, and canonical tags.
- Ensure responsive design across mobile, tablet, and desktop devices.
- Manage website deployments, dependency updates, and routine maintenance.
- Work with content, design, and marketing teams to deliver website updates.
- Monitor website health and resolve issues affecting availability or functionality.

Required Skills and Qualifications

- Practical experience with React.js and Next.js.
- Strong knowledge of JavaScript, HTML5, and CSS3 and familiarity with TypeScript is a plus.
- Experience integrating REST APIs and handling authentication, errors, and data fetching.
- Understanding of Next.js rendering approaches, including server-side rendering and static generation.
- Working knowledge of technical SEO and website performance optimization.
- Familiarity with Git, browser developer tools, and deployment platforms.
- Strong troubleshooting skills, attention to detail, and clear communication.

Preferred Skills

- Experience with CMS platforms or headless CMS integrations.
- Familiarity with Google Search Console, Google Analytics, and Lighthouse.
- Knowledge of web accessibility and basic website security practices.
- Experience with automated testing and deployment workflows.
